----- AbpMon is an advanced monitoring and statistics tool with a graphical user interface. It provides both a long term and short term monitoring of the Windows system, including CPU, memory, GDI/USER and network resources. It also shows memory leaks, all type of warnings, alert messages, system performance, performance summary and more.

It allows one to reboot or shut down the system automatically. Cabinet ministers and senior Conservative MPs are demanding answers from the prime minister on his controversial Brexit deal. Boris Johnson and his cabinet are privately horrified that he cannot guarantee the UK will leave the European Union by the Oct 31 deadline. The PM is refusing to rewrite the deal, but instead is urging MPs to back it and underlining that no ifs, no buts

and no rewrites. Senior Tories are urgently trying to persuade Mr Johnson that the withdrawal deal is a bad idea and should be changed, with some of the senior members of the PM's own party dismayed by his tactics. One cabinet minister said they are trying to persuade Mr Johnson he is "crying wolf" and he is "missing the big picture". "The question for everybody is whether these amendments could work," another senior figure said.

"Parliament is meant to be able to change the deal, it's the whole point of the system. You can't just go round saying it's all perfect and we're not going to change it. "It's absolutely a secret, we're not going to talk about it publicly," one minister added.

"There are lots of people who see it differently, and that's fine, it's democracy, but we have to live with the result," a senior minister said. Another source added that they are "raging" against the deal

and have “fought against this deal for a long time” but are being forced into a corner because Mr Johnson doesn’t believe in no deal. One senior Brexit figure said Mr Johnson is “crying” that MPs are making life difficult. “The only other choice would be no deal - and we all know that is not a solution,” the source said. “He would now appear to be a man who does not believe in a deal. “It

The free RAM Monitor, is a program that allows you to view the memory usage of your system(s). It will display low resources on your system, If there are any memory leaks. If you have any system problems, it will allow you to view all "System Irritants" and get tips to deal with the problems. The program is meant for Windows 2000 and XP, although it will work on other Windows versions.

System Requirements:

Visual novels have an unfortunate tendency to have the most impressive, and by that I mean absolutely asinine, requirements. But we are a visual novel community, and who's to say our users aren't worth it? So, here you go. Operating System: Windows XP SP3 and up Processor: 1.8Ghz or faster Memory: 512MB or more (some of these have steeper learning curves, but stick with it)

Graphics: 800 x 600 or greater resolution DirectX 9 or better
