In 2007, the original AutoCAD was renamed AutoCAD LT. The next major release of AutoCAD in 2009 was AutoCAD 2009. AutoCAD 2010 was released in late 2009. The current version of AutoCAD is AutoCAD 2017. In the early 2010s, the original AutoCAD was renamed to AutoCAD LT. AutoCAD is one of the most successful and best-selling CAD programs in the world. According to the company's website, the 2015 revenue for AutoCAD was \$1.116 billion.[1] AutoCAD has sold nearly 100 million licenses for AutoCAD since its release. In May 2012, Autodesk reported that AutoCAD had sold 75 million licenses.[2] History Origin AutoCAD was originally released in 1982 as part of the DrawDraft program, which also included a word processor and a page printer, and which was developed at the Autodesk facility in San Rafael, California. The program was first released in December 1982 on microcomputers (such as the Hewlett-Packard HP-200 and HP-300 line of personal computers). The first version of the software was called the DrawDraft Workstation; it was designed to be used as a drafting and design application. It was released on Apple II, Apple II Plus, and IBM PC compatible computers. In 1983, the software was renamed AutoCAD, although DrawDraft continued to be available for the HP-200 and HP-300 computers. The DrawDraft program was developed and marketed by HP. In 1984, Autodesk released DrawDraft as AutoCAD and continued to develop it, as well as release new versions of it. The first version of AutoCAD was originally released on Apple II and IBM PC compatible computers. In 1987, Autodesk released AutoCAD LT for the Apple Macintosh. AutoCAD LT is a simplified version of AutoCAD for general drafting and general drawing, as opposed to drafting and design applications. For example I have the String "9,12,21,38,44,23,55,26". My string should be converted to an array, Array(0 => 9,1 => 12,2 => 21,3 => 38,4 => 44,5 => 23,6 => 55,7 => 26) I tried the php function like this \$total = preg_match_all("/\d+/", \$string, \$matches); But it does not give me the expected results. A: You may use the preg_match_all with "s" flag and capture digits with positive lookahead: \$result = preg_match_all("(?=\d+)/", \$string, \$matches, PREG_SET_ORDER); See the PHP demo. Pattern details (?=\d+) - a positive lookahead that will fail the match if the preceding subpattern matches there: (?=\d+), then there must be 1 or more digits Output: Array ([0] => Array ([0] => 9 [1] => 12 [2] => 21 [3] => 38 [4] => 44 [5] => 23
