Q: How to properly create a new Django Project? I've been using django for a while (5 months). But I'm a beginner. I want to start a new project on my own. Now, with all my work copied and pasted on a single file (with my own variables and whatnot), how would you do to make a new project? I'm using the following template (and I noticed that it's what is recommended on a new project):

```
from django.conf import settings
from django.core.management import setup_env, teardown_env
setup_env(settings)
from django.db import models

class BlogPost(models.Model):
    title = models.CharField(max_length=200)
    message = models.TextField()

class Author(models.Model):
    name = models.CharField(max_length=100)
    surname = models.CharField(max_length=100)

class Book(models.Model):
    name = models.CharField(max_length=100)
    author = models.ForeignKey(Author, on_delete=models.SET_NULL, null=True)
    publish_year = models.IntegerField()
    content = models.TextField(blank=True)

class Summary(models.Model):
    book = models.ForeignKey(Book, on_delete=models.CASCADE)
    summary = models.TextField()

class Photo(models.Model):
    photo = models.ImageField(upload_to='photos', blank=True)
    book = models.ForeignKey(Book, on_delete=models.CASCADE)
    # author = models.ForeignKey(Author, on_delete=models.CASCADE)

class Comment(models.Model):
    photo = models.ForeignKey(Photo, on_delete=models.CASCADE)
