

Vistascript is a scripting development environment and runtime for WinFx. The developer includes a syntax highlighting editor, winform designer, class and file browsers, interactive debugger, compiler and ftp based editor support for remote scripts. The runtime interpreter supports XMPP, JSON, REST and SOAP protocols and can import/export native PHP or Smalltalk data. The Vistascript language is modelled after the Javascript 2.0 proposal with extensions such as Smalltalk block closures.

Vistascript was made for building Ajax style programs on Windows Vista and workgroup or game applications over the Google instant messaging service. The Vistascript runtime is a bytecode interpreter which can dynamically load Winforms stored in XML format or WPF controls stored in XAML format. Callbacks are dynamically assigned after controls have been loaded. A version of the Vistascript runtime is planned for the Microsoft WPF/E browser plugin during the summer of 2006. Requirements: [?] Dotnet runtime 2.0 Limitations: [?] 30 day trial Two people write 100 lines of code. After that, the first one declares that he is unable to continue. The other looks at his code and assures him, "you've got this". It takes him no time at all to write the additional code to fix the bug. In other words, 20% (2) of the code contains the bug - no serious user will understand that code and no-one will dare expose their system to that vulnerability. There must be a process in place to spot this sort of thing and resolve the problem before it grows to the point where a hacker will take credit for it. Lesson to be learnt: Know what you are doing at ALL times. 20% (0) Performance

How long does it take to perform the following task? We cannot measure time. We cannot speed things up. Our application is too complex and requires too many resources. We do not know how to measure this. In other words, we have no way of knowing what is going on at any given time. Lesson to be learnt: To do anything worthwhile - you must be able to measure the success of your efforts. 10% (1) Server Deployment How many servers do you need? One. You should never run more than one server at a time. Two.

[?] Vistascript is the first scripting environment that provides a declarative/performative mix. An XAML layout for the language combines a powerful feature set for applications with a powerful scripting language for over the network application (ajax).

[?] The developer includes a syntax highlighting editor, code editor, class and file browser, interactive debugger, compiler and ftp based editor support for remote scripts. [?] The runtime interpreter supports XMPP, JSON, REST and SOAP protocols and can import/export native PHP or Smalltalk data. The Vistascript language is modelled after the Javascript 2.0 proposal with extensions such as Smalltalk block closures. Vistascript

was made for building Ajax style applications for the Windows operating system including at the same time Ajax style applications for the Google instant messaging service (GChat). The Vistascript runtime is a bytecode interpreter which can dynamically load Winforms stored in XML format or WPF controls stored in XAML format. Callbacks are dynamically assigned after controls have been loaded. A version of the Vistascript runtime is planned for the Microsoft WPF/E browser plugin during the summer of 2006. Requirements: [?] Dotnet runtime 2.0 [?] 30 day trial Vistascript Client/Server Description: Vistascript Basic is a basic file server developed as part of a free, cross-platform Google discussion application, Jomolhari. The Vistascript server provides an event-driven HTTP server, using (S)JAX on the server-side to allow building a rich, dynamic web-based application from a more traditional desktop application on the client-side. [?] Vistascript Basic is designed to take advantage of the google web-service for events. It is very simple to implement. When you broadcast an event, the client will perform its appropriate actions as required. [?] Vistascript Basic provides for the server to host a web-based application written in Javascript and Flex. [?] The client is written in C# for Windows and Flex for the MAC (but should work with standard Flash). [?] Javascript is very limited for server-side work because of the security restrictions placed on the browser. Vistascript Basic solves this a69d392a70

System Requirements:

- Windows 7 64-bit or higher
- 1.4 GHz CPU
- 2 GB RAM
- 1 GB of VRAM
- NVIDIA GTX 460 or AMD HD 4850 or better
- .NET 4.5.2 and DirectX 12
- 2560 x 1600, 16:10, or 16:9 display (1920 x 1080 recommended)
- 2nd monitor (for benchmarking)
- USB mouse and keyboard (for benchmarking)
- DVD/BD drive for installation 1.0.
