Home --Auction Top --Software 7 Best Project management Apps That Are Essential for Remote Employees! home --Software . Our results are, within the limits of the uncertainties, in good agreement with the values reported by @Hoc05 [@Cac06; @Hoc07; @Hoc08; @Hoc09]. As expected, a significant correlation between the magnitude of the X-ray afterglow and the $(U-B)_0$ color of the optical afterglow is observed (Figure\{fig:afterglow\}). We infer a value of the slope of the fitting line in the range -1.1 to -1.3 , as typical for GRB afterglows, with a lower limit of -1.1 (2σ), corresponding to the range of slopes reported in the literature (see [@Ber09b]). The lower limit of -1.1 agrees well with the distribution of the average (A_V) and median ($A_V \sim 0.05$) extinction values presented in @Kal07.
