The Lite Edition contains the tools to do some of the most commonly used performance tests, such as the “HTTP Trace”, “Soap Trace”, “Asmx Trace”, “Decompile Soap”, and “Decompile Closure”. Other common tests, such as “DoS”, are not included. WCFStorm Lite will test the performance of your WCF services in the server, as well as client code. It does so by throwing Http and Soap requests at your service methods as well as testing the performance of your WCF bindings. Features of WCFStorm Lite: Usage The Lite Edition is provided as a Visual Studio Extension to allow you to perform tests on your WCF services as quickly as possible. HTTP and Soap tests are accessible from the Debug menu. HTTP Load Test Allows you to load test the service in the development or production environment. Soap Trace Allows you to monitor and analyze the performance of your WCF service methods in a Soap trace, in real-time. Decompile Soap Allows you to decompile a Soap trace into a decompile filter definition in the NetReflect format. The filter definition can then be easily consumed from the Reflection-Based Dynamic Proxy. Soap Decompile Allows you to decompile a Soap trace into a decompile filter definition in the NetReflect format. The filter definition can then be easily consumed from the Reflection-Based Dynamic Proxy. HTTP Trace Allows you to monitor and analyze the performance of your WCF service methods in the development or production environment. REST Trace Allows you to monitor and analyze the performance of your WCF service methods in the development or production environment. Code Generation Allows you to decompile a Soap trace into a decompile filter definition in the NetReflect format. The filter definition can then be easily consumed from the Reflection-Based Dynamic Proxy.
