We can't afford to use a lot of different applications and tools, since it can take a lot of our time to track them all down and start using them. To provide you with something easy to use, we decided to create this quick and efficient review guide of the tools you probably use every day. If you feel this is a product we should mention in our review and download guide, you can leave your thoughts and feedback in the comments, and tell us your opinion of the tools. Otherwise, stay tuned for the next release of this review. This guide was put together by our team and readers of our product reviews. Our team: Thomas, Michael, Victor, and Thomas. In this video we'll be looking at a feature that has been introduced by Windows 8 - the ability to lock apps and run them as a child. When we see Windows 8 apps we'll need to note that the Windows Store has been (mostly) removed from the operating system and so in-built options to force an app to be run as a child have been removed. Instead, we need to install the app first, then launch it (we can do this by pressing Win+R and typing appname, e.g. "C:\Users\User\AppData\Local\Apps\2.0") In this way we can force an app to not be able to change files without our express permission. We can do this by selecting an app and clicking "Always run as admin"
