History Prior to AutoCAD (originally called "Draft It"), the first true CAD programs were introduced in the 1970s. They were primarily used for architects and engineers, such as the AutoCAD program developed by the Autodesk of the time. In the late 1970s, CAD programs were still primarily used by architects and engineers for complex projects, such as designing a building. Eventually, these programs would evolve into full-fledged drafting software programs, such as the AutoCAD program. However, AutoCAD wasn't the first CAD program to be created. In the late 1960s and early 1970s, Sperry Rand's drawing software developed for the Sperry Rand Univex, among other systems, was widely used and helped influence the CAD market. Although later popular in the 1970s, Sperry Rand's "Univex" was one of the first, and only, real-time 2D and 3D CAD programs to be introduced. With 3D capabilities, it helped shape the market and products in the future, but eventually, it faded into oblivion. Later, Sperry Rand was acquired by Johnson Controls and eventually was sold to UniData (a division of Honeywell). The growth of the CAD market in the 1970s was extremely slow, due to companies being unwilling to invest in the development of CAD programs. Furthermore, 2D CAD programs were far more advanced than 3D CAD programs. By 1982, however, CAD programs were beginning to evolve from strictly two-dimensional applications to three-dimensional applications, although this technology still had a long way to go.

Design philosophy AutoCAD users are primarily architects, engineers, drafters, and designers. However, AutoCAD is also a general purpose computer-aided design (CAD) and drafting software application. It has many advantages over the much more expensive and exclusive CAD programs. As a general-purpose CAD application, it supports every category of CAD. It is the most widely used 2D CAD software. AutoCAD has been significantly improved over the years, but there is still room for improvement. AutoCAD allows users to draw lines, curves, and polylines. It also allows the user to insert text, change the color of text, and create groups. Besides the ability to edit and manipulate lines, curves, and text, it is possible to create rectangular, rectangular angled, free-form, and irregular polyline shapes

In 2011, AutoCAD also began offering remote access through Windows Live Mesh. Legacy AutoCAD Classic, which is a classic-style graphical user interface and was available for the OS/2 operating system. AutoCAD 3D, an architectural and engineering software package, was introduced in 1993. It was re-launched in 1998 as AutoCAD R14, and in 2009 as AutoCAD LT, which is a licensed implementation of AutoCAD 3D for the Windows operating system. In 1998, Autodesk discontinued the OS/2 version of AutoCAD, as well as the last AutoCAD 3D version, and released AutoCAD 2004 for the OS/2 and Linux platforms, with a commercial version for Windows and Mac OS X. In 2003, Autodesk released AutoCAD R2009, the latest version of AutoCAD. Autodesk continued to update AutoCAD R2009 through 2013.

FRESNO, Calif. — So many employees at the Fresno Electric Power District's Patterson Power Plant in Tulare County were laid off that last week, the state's largest utility company let those workers go, then announced it'd rehire them. The Fresno Bee reports that on July 17, the state's largest utility company, Pacific Gas and Electric, cut about 700 positions at the Patterson plant. It was just a week later, on July 24, that the company announced it would hire all of the laid-off workers. PG&E didn't explain why it rehired all the employees or when the layoffs occurred. It did say, however, that the layoffs were not related to the 2017 California wildfires, which were burning at the time. "It's the same reason we laid people off in November," said PG&E spokesman Joseph Tomasso. "If we find that the market requires it, we will make changes." Though the jobs are no longer available, PG&E said the employees will be rehired as soon as possible, according to the Fresno Bee. "They're going to get back in the pipeline," PG&E spokesman Andrew Johnson said. The Bee says no one
