Procedural functionality has been integrated into AutoCAD, meaning that the application can be used for both 2D drafting and 3D modeling. This broad functionality allows AutoCAD to be used for both small-scale product development and large-scale architectural and infrastructure design. The basic workflow for all AutoCAD users involves creating and modifying 2D or 3D drawings. These drawings can be exported in many different file types, which can be used in different software applications. The user interface (UI) for AutoCAD was introduced in 1992, featuring a 2D environment with the capability to create orthographic, oblique, and perspective views, and to edit and trace 2D objects. The application includes functionality for 2D drafting (measuring, analyzing, and planning), 3D modeling, and 2D/3D schematic design. In addition, it features support for most drawing and file formats, image processing, powerful charting and graphing tools, and advanced features for 2D design such as profile-based editing and linking. AutoCAD is a comprehensive application, allowing users to create drawings using the same tools they use for drafting. It is able to import and export data in a variety of formats, and supports vector, bitmap, raster, and transparency images. AutoCAD can be connected to other software applications and work spaces via a web application, but can also be run from within its own virtual work environment. History AutoCAD started as a project at the Ontario Research Centre for Computer Graphics (ORCCG) at the University of Toronto. The project had two parts: a CAD application that would run on the microcomputers that were coming on the market at the time, and a graphics library that would allow a variety of software applications to use the graphics functions of the microcomputers. Two of the key people behind AutoCAD were Tom O'Sullivan and Jim Blinn. O'Sullivan and Blinn were originally hired by ORCCG in 1977 to create GRAFIK, an early CAD application, but left to form their own company, Data Design Corporation (DDD). In 1977, DDD developed HIDATA, a microcomputer graphics library that was adopted by more than 200 software developers, enabling them to use graphics to help them create new applications. In 1980, DDD's first CAD application, GRAPHICS, was introduced to the

History AutoCAD was created in 1982 by John Walker, a former member of the Micrografx team, and subsequently worked as a business analyst. The first version of AutoCAD was released on 16 February 1982. The current version is AutoCAD LT, released 26 February 2013.

Autodesk acquired a 17% interest in Corel on 22 July 2008. As of 2011, Autodesk acquired Corel in a deal worth \$338 million, buying the majority of Corel for \$50 million and investing another \$218 million. Autodesk also agreed to pay \$4.50 per share in cash to Corel shareholders, for a total cost to Autodesk of about \$1 billion. Corel was purchased by MicroFocus on 26 February 2014. Autodesk acquired DynaMotion on 13 November 2009, a provider of motion graphics. This acquisition brought in Autodesk MotionBuilder, which allows users to create 3D models and animations. In March 2013, Autodesk acquired Build software. On 26 February 2013 Autodesk acquired CorelDRAW. In August 2013, Autodesk acquired the US based multinational construction management software firm, Meridien. In August 2014, Autodesk acquired the architectural design software company, Arup. In July 2015, Autodesk acquired DGN mobile, a provider of augmented reality design tools. On 26 February 2014 Autodesk acquired the non-core assets of Corel. Autodesk and Corel will continue to collaborate on a number of products and new business opportunities. Corel's shareholders will receive \$4.50 per share in cash, for a total cost to Autodesk ca3bfb1094

Noël Hall Noël Hall is a leading New Zealand acoustic, electric, and drum kit tutor, author, performer, radio host and key figure in the modern jazz revival movement in New Zealand. Biography Hall was born and raised in New Plymouth and studied music at the University of Waikato, in Hamilton, New Zealand. He then moved to Auckland and joined the band Butcher Brown, who had been founded by bassist Tim McKee. In 1997 Hall was invited to join the band, with McMkEE becoming the band's musical director. He went on to tour the United Kingdom and the United States with the band, taking on bassist duties, sometimes playing acoustic guitar, piano, harmonica and singing backing vocals. From 1999 to 2002, Hall was a member of the band Japan. Hall's first recording as a bandleader was "Good Earth", released in 2001. Japan were nominated for five New Zealand Music Awards, winning 'Best Alternative Album' for their first album. They disbanded in early 2002 and Hall moved back to Auckland. Hall formed The Noel Hall Quartet in 2002, playing original music, and has since released three albums, by which time he had switched to playing electric bass, and produced a solo piano album, Walking on Water, in 2002. In 2003 he moved to Wellington, New Zealand, where he completed a bachelor's degree at Victoria University of Wellington, graduating in 2005. In 2007 he won the Noel Hall Award for Excellence, which recognises New Zealand's finest independent record label. He founded the label, Coda Records, and it has released a wide range of New Zealand music since then. In 2012 Coda released his debut solo album, Notes for an Insomniac. In 2010 Hall and many other jazz musicians and academics founded the New Zealand Association of Jazz Educators, with the aim of developing New Zealand's Jazz education. Hall, as the board chairman, has taken the lead in establishing the NZAJE and organising and leading the annual New Zealand Jazz Educators Convention (NZJEC). Also in 2010, Hall and his band, The Noel Hall Quartet, won the 'Best International Group' award
