Action RPG "Elden Ring" is a highly immersive game that gives the player an intense immersion of the fantasy world. After the War of Heaven between Fire and Water broke out, the Three Elden Lords (Sword, Shield, and Lance) appear to console a female princess of Heavenly Water, and bind her into the Elden Ring. The princess is sealed in a magical item, the Elden Ring, which is then buried in a treasure chest, granting three people each the chance to raise the princess and become her personal retainer.

- **Combat Action with Unprecedented Depth and Immersion** Choose from a wide variety of weapons in an action game that empowers you to experience intense, fast-paced, and intense melee combat where the rules of the game do not limit your imagination and the possibilities of strategy.
- **Multiplayer Combat with a Story That Infinitely Conforms to You** You can take on powerful enemies cooperatively with others as your allies, and choose a partner to partner up with. You can dramatically change the encounter's outcome by combining various teamwork strategies.
- **Unprecedented Crafting System** Elden Ring's crafting is based on a skill-based automatic mode that places the player in the role of the master of a production line by generating jobs and assembling parts from his or her hand.
- **Items to be Used in the Game** The game does not limit the number of characters created. Once you have created your character in the online game, the items that can be used by that character can be freely accumulated, and it is possible to combine them to be used by that character.

**stack of dielectric layers. The stack is made up of a set of parallelepipedal layer plates each having a top face and two side faces, the top face and the two side faces each having different thicknesses in order to obtain different permittivities of the different layers of the stack. (DE)A dielectric stack of an electric apparatus is described having a dielectric core layer having a top face and two side faces. The top face is configured such that the dielectric core layer is formed by a layer material having a first dielectric constant, and the two side faces are provided with at least one recess for the purpose of forming a dielectric outer layer having a second dielectric constant greater than that of the first dielectric constant. Thus, the dielectric layer stack is formed having dielectric materials with different dielectric constants. A dielectric stack of an electric apparatus is known, for example, from WO 2009/162674. The dielectric core layer described therein has a U-shaped base layer with a first spacing layer and a second spacing layer.**
