“HyperMotion Technology
works by using our
understanding of the unique

motion of each player, developed by our dedicated Player Analytics team,” said Renato Chaves, FIFA Lead Producer. “This delivers authentic player behaviour and makes each match more realistic and entertaining than ever before.” Chris King, lead creative director at Obsidian, added: “The goal with the new ball movement functionality was to make the ball behave as though it’s actually propelled by a

player's foot. Throughout development, we tested and adjusted the range of motion for each player to get that right and the end result is really exciting – the ball looks like it's coming off the foot of the player it's being passed to.” Watch this space for more information on FIFA 22 as it becomes available. Then on Wednesday, Bryan Singer dropped a bombshell, confirming reports that the last major film he was

attached to direct was 2011's Jack the Giant Slayer. So, if you're about to go to any parties, or anything like that, feel free to tell those pals you're spending the night with "Bryan Singer, You're Fired!" Or something.

Anyway, Singer's new film, X-Men: Days of Future Past (not a sequel to X-Men: Days of Future Past—the X-Men movie from the Nineties), stars Daniel, Nicholas, Peter, Ian, and the kid from How I Met

Your Mother. That's all we have for now.Q: Should you minimize the size of files containing -prefixed glob strings when building a deb? I'm building a deb for Ubuntu 15.04 using a build script. The relevant bit of my build script looks like this:
