So, I should show only the column names. Is it possible? Any help would be appreciated. Thanks A: You can set the column order for your table. The model stores the order of columns in order. See javadocs. By default the column order is 0, 1, 2,... Then you can implement a custom renderer for an individual column using `javax.swing.table.TableCellEditor`. One of the built-in editors is the `DefaultCellEditor`. It supports more advanced custom rendering of cells. Lipids. PROVEN HISTORY OF A BRILLIANT CLASSIC PROPERTY LOCATION THE MYSTERY OF THE ORIGINS OF SAN DIEGO Originally, what would become Mission San Diego was an adobe village inhabited by the Chumash people who were the first inhabitants of the area. Today, the mission houses a museum and visitor center and is the site of events, festivals and public programs throughout the year. The pueblo or adobe village of Mission San Diego is a National Historic Landmark. On July 6, 1769, Father Junipero Serra received a Mexican land grant from the hands of the Spanish king and established Mission San Diego. The mission was named for St. Diego de Alcalá, the fourth bishop of Toledo. The Chumash Indians lived near the coast in the area that is now San Diego. The mission was built to serve as a refuge from the frequent attacks by the Chumash, Comanches, Indians from New Mexico, and other Indians. The Mission San Diego Indians helped the Spaniards defeat the Chumash. A legend tells of the mission's six bells. Serra believed that one of the bells was a gift from one of the Indian tribes that

During nursing research, the use of audiotape is common practice in the data collection process.

However, storage of these audiotapes is problematic. If these tapes are not stored in a secure manner, they may be misplaced or destroyed over time. The purpose of this study was to determine the ease with which the retention of research records can be achieved. A questionnaire and pilot study with 22 volunteers were used to test the feasibility of a method of record retention. Subjects were asked to brainstorm possible methods of record retention and record a method they would use in their research. Following the subject brainstorm session, there were four methods: printed copies, microfiche, audiotape, and electronic digital recording. A pilot study was then conducted using 20 volunteers. The microfiche method was chosen as the optimal method. Volunteers were then asked about their opinion of the microfiche method. Statistical analysis for the pilot study indicated that there was no significant difference between the microfiche and printed copy methods. This same analysis was applied to a follow-up study with 124 subjects. The difference in responses between the first and second study was found to be significant, which indicates that this technique can be used for retention of records. The method of retention may be a significant variable in how data are collected. Future research will focus on subjects with low vision to assess the acceptability of a method for retaining records.1. Field of the Invention This invention relates to a method of making printed circuit boards and particularly to a method of making a printed circuit board having a through hole, wherein the end portion of the through hole is made continuous with the main body of the hole. The invention also relates to the structure of such a printed circuit board. 2. Prior Art The invention is applicable to a printed circuit board including: (A) a hole extending therethrough along a main axis of the hole and having a top end and a bottom end; (B) at least one through hole having a main axis and opened in the hole along the main axis thereof; and (C) a conductive layer made of a metal or alloy deposited on the main surface of the board. When such a board is mounted on a circuit substrate, a lead-
