Field of the Invention The present invention relates to a power-saving system for a document-scanning apparatus and, more particularly, to a power-saving system that reduces a processing time for searching for documents in the scanning operation of a document-scanning apparatus. 2. Description of the Related Art Conventionally, scanners with automatic document feeders and document-scanning apparatuses with automatic document feeders are disclosed. Generally, a document-scanning apparatus scans a document that is to be scanned by moving the document with respect to a scanning unit. A document being scanned is fed to the scanning unit after being stored in a document

tray, a document sheet feeder, or a document temporary-storage tray. The document-scanning apparatus may include a scanning unit for scanning and a conveyor unit for conveying the document to the scanning unit. Conventionally, an automatic document feeder includes an automatic document feeder motor for driving the document tray and the document sheet feeder motor for driving a document feeding device, such as a roller. The motors rotate the feeder tray and the document feeding roller while a paper sheet is fed to the scanning unit. The feeding of a document results in power consumption. Thus, in the case of a document-scanning apparatus, a user has to wait for a long time before the start of the next document scanning operation after an end of the previous document scanning operation. To reduce the time required for scanning a document, a scanning unit scans the document in a dark environment. When the document is stored in a

document tray or a document sheet feeder, it is desirable that a document to be scanned is immediately fed to the scanning unit. 2 1 * x *

where's the key for fobrocheno, in German.Q: Ionic
App crashes after installing, but app.js line isn't
erroring out I've been trying to get the Ionic
framework running on my Win 10 laptop, from
scratch. I followed this guide: I've also followed the
suggested approach in this post, and this one: Ionic
3 running on Windows 10. App crashes from 'ionic-
plugin-keyboard' 'when' deployed to Android I have

XAMPP installed, all the SDK's from the 'windows build tools' added to my environmental variables, and set my PATH to include those. My Angular 4 app loads, and I can access the main page, but it won't load. I think this is because it can't find the app.js (included in the 'ionic-app-script.js' package). What I found on line, and ran, was: ionic plugin add cordova-plugin-device-motion ionic plugin add cordova-plugin-device And then: ionic plugin add --rev.2.1.0 --save And that resulted in this error: No available plugins were found. I restarted with this message and no new message (or app restart). So I thought maybe the path to the app.js file was wrong, but I changed it to this: File: C:\xampp\htdocs\KbionicApp\js\app.js Contents: var IonicApp = require('ionic-app'); var app = new IonicApp(); And that didn't change anything, except after a restart I received this error in the command prompt: C:\Users\kgilbertson\AppData\Roaming\pm\ode_modules\cordova\ode_modules\q\q.js:126
