Field of the Invention The present invention relates to a filter circuit for removing interfering signals from an input signal, and more particularly, to a filter circuit for removing interfering signals that are present in a modulated signal. 2. Description of the Related Art As is well known, multi-carrier communication schemes for efficiently using a wide frequency band have been developed. For example, the IEEE802.11a/g standards defined by the IEEE and the next generation UWB standard based on Orthogonal Frequency Division Multiplexing (OFDM) have been widely used. In these standards, a transmission signal is generated by carrying out FFT (Fast Fourier Transform) on a signal based on a multi-carrier modulation scheme such as OFDM and orthogonal modulation.
