During the late 1980s and early 1990s, Autodesk also developed a set of "clients," which could connect to its servers and request updates for their drawings. This was a massive undertaking as a GIS database was required, and most of the GIS components were written from scratch. A GIS client was to be an extension of the map or sketch layer, and allow drawing-related functions like "Intersect" or "Exterior Design" for an exterior. When a GIS client allowed users to edit a layer's attributes, it was called a GeoClipper. Another innovation introduced with the "release" version of AutoCAD in 1992 was called AutoCADRITE, which allowed users to draw plans on any surface, with AutoCADRITE then being the name of a Revit-like product built from scratch. In 1994, the VectorWorks Architect CAD package was released, based on AutoCADRITE, and this was the first of the "X Series" CAD packages. By the late 1990s, AutoCAD had become the de facto standard for CAD packages. The X Series and earlier products were being phased out and in 2006, Autodesk announced that the X Series would no longer be developed, and that "Acad" (the X series's successor) would also not be developed after 2012. A GIS-focused extension of AutoCAD was called AutoCAD Map 3D in 1993. It allowed the user to edit and paint layers in a GIS context. This was the start of the online AutoCAD Map 3D application, and after a few years, this was turned into AutoCAD.AutoCAD Map 3D. Autodesk Revit Revit was introduced in 2001 with the release of Revit 1.0. Autodesk initially marketed it as a "rapid design tool," and it was marketed in that way for a while. Autodesk began bundling Revit with AutoCAD in 2004, and released several updates for both products in tandem. Another product that Autodesk introduced in the early 2000s was called SpaceCenter, which was an application that allowed users to edit various features in Autodesk's landmark SpaceCenter database. The landmark SpaceCenter database was an accurate, comprehensive map of the United States of America. In 2012, Autodesk acquired

Click File and then click Import to open the import utility. Click Import from File. Click Open. Select the.lga file and click OK. Click OK. I was expecting a command line to be generated with which the Model was able to be used within the program. A: Thanks for your help, I have managed to get this working after some trial and error. I used the.lga file supplied by Autodesk and not the.dxf file. It appears to me that the.lga is just the format which Autocad accepts whereas the.dxf is just the format which the program is expecting. For those who are interested, I had to do the following: Open a command prompt (not the Windows Command prompt) Navigate to the location of the.lga file Type the following command autocad -c You should now see a list of models autocad -c | findstr [Models] In my case, the command was autocad -c | findstr [Models] 12c Model 13c Model 14c Model 15c Model 16c Model 19c Model 24c Model I can now use the command line to call up any model I require from the.lga file. Top tip And that's one of the many surprises of the presidential campaign. Most candidates have put together a quick list of what their second term would look like. We get a glimpse of what those plans may be. This new president will have different opportunities than any president in recent history to reinvent government and the way it works, to make government more efficient and effective, to lower taxes and reduce the size and scope of government, to make government more responsive to the people, and to help Americans rebuild their communities and their lives. The next president could start by bringing government more in line with the spirit of the times. Technology has made our society smaller, more connected, and global. And the shrinking world we live in demands a new global leadership. The United States can't do it all alone. And it doesn't have to. The Internet lets everyone know where to get something, how to get something done and to create something. The president must embrace the digital age and use the Internet to provide
