Download (1:23) . [HTTP] GetData Recover My Files 4.0.2.441 [FULL][Portable]It's an exciting new year, apparently: a year of progress! Or maybe it's a year of regression? In any case, here's a look at my top five "annual wish-list" items. 1. A way to quickly and conveniently see which sites/apps/games you're logged into, so you don't have to log out and then back in again every time. 2. A way to search for images on the web, and have them brought to your desktop -- in one folder, of course. 3. A way to search the web, and to have links to relevant results immediately appear in a new sidebar tab. 4. A way to use IMAP to check messages on all my computers. 5. A way to share, view and edit documents on my mobile.Q: Proving that if N is a normal subgroup of G , then N is a characteristic subgroup of G . I don't know how to prove this. I mean, how do I do it? I know that for a normal subgroup N , $\forall g \in G, gng^{-1} \in N$ (not only gNg^{-1} !). How do I combine these two facts to get that $gng^{-1} \in N$, which is what I need to prove? A: Since G is a group, N is a subgroup, so $N \subseteq G$. Now, $(gn)^{-1}(gn) = (gn)(gn)^{-1} = (ng^{-1})(n^{-1}g) = n^{-1}gng^{-1}n \in N$ i.e. $gn \in N$, so N is invariant under left translation. Since $N \subseteq G$ and G is transitive, $N = G$, i.e. N is a characteristic subgroup. One of conventional methods for fabricating a semiconductor device is a process of forming a gate insulating film by a chemical vapor deposition (CVD)
