turn it on and crank it up. in the studio, simply dial in your effect from a super-sweet selection of 24 pro-quality algorithms, then mash up your audio content with minimum fuss, quickly adding dynamic variation to your arrangements. when i loaded up a short sequence and started experimenting, i was immediately impressed by how intuitive the interface was. using the available presets and play/undo buttons, i discovered the selection of easily-useable controls and potent effect changes. i was quickly able to get tornado to the part of my brain that makes "catchy-yet-innovative" phrases. i like the idea that some of the settings are easy to understand but hidden behind a small button. that way i can go off on wild tangents by experimenting and then discover that by default, a specific setting is exactly what i want. a note on effect combinations. when i turned tornado on, the first thing i did was try to make it

sound as different as possible from the standard free-walled filter, because i didn't like the sound of its in-house instrumentation. this is perfectly okay: turnado is able to combine sounds that will result in a different auditory experience. fortunately, sugar bytes have provided enough settings to allow you to vary the sound of a track to your heart's content.
