above is an example of how snapter is supposed to work with a book. the software does a pretty good job with the automatic cropping. if you want to manually crop the scanned image, you can do it on the left and right sides. the software doesn't force you to crop the image to a standard size, so you can have some extra breathing room. also notice how the software doesn't care if the left or right side is in the middle of the image. the left image is the original document and the right one is the automatically scanned version. i wanted to verify that it works with one image as well as two, so i did a quick test. snapter handles it the same as the previous tests, which is to say it is able to find the exact position in the original image where the two images overlap and it can crop the right side of the original image to the cropped version of the left side. the printed output is a page with the left and right sides of the document side by side. i like that option. if you want the left side to be on top, you can put a little bit of white space between the two sides. all in all, i am very impressed with the snapter software, especially considering the simplicity of the application. it is a free application that runs in any windows version and all you need is to have an image and the software will do the rest. if you are looking for a simple way to scan and save images from documents, snapter may be the solution for you. first, it's not perfect. there are slight difficulties with watermarks and slight differences in the paper texture, especially at the edge. but it's not so bad that it distracts me. there's a lot of potential to make this better, though. the biggest issue i see is a comment section. there's an option to turn it off, but i wanted to see what people are saying. at the moment, i see a couple of good suggestions and several "me too" suggestions, but not a lot of valuable comments. for example, i can view and crop the scanned image in a little box (usually ~500x500px) and then click "email". but there's no way to get at the comments (like a pdf version). the email form is also not easy to fill out. i feel like i'm being asked to enter a lot of data that's not really required. second, i'd like to see some of the scanned images displayed instead of raw scan data. for example, i could like to see the title and author of the document. finally, i'd like to see a bunch of features that are already in the paid version of snapter. for example, i'd like to be able to zoom in on the image. also, the paid version of snapter allows you to export the pdf files for sale, which would be a bonus to anyone who was looking to resell the scanned images. overall, the free version is not bad, but i need a way to email the comments that people are making. if i knew it was coming, i would have purchased the paid version. in conclusion, i'm going to use snapter for the next few weeks. if anyone's interested, i'll do a follow up review of the paid version. ---update: i just purchased the paid version, and i'm very pleased with it. the pdf export is a must have feature. i feel like i'm getting more than i payed for. i'll be using snapter ice 2.0 for the remainder of the semester and maybe next semester too.

Snapter Ice 2.0 R4 Full

I remember reading many users' comments about it on the Snapter support page and, after a time, concluded they must be happy with the program because Snapter has made such big waves. Indeed, although a lot of other scanners come on the market every month, Snapter has been able to make a niche for itself and attract very active users, and that is impressive. But for some of us who find other ways to scan, the program, as it stands, does not fit our needs, which is probably why it is not installed on all computers. I have installed the Snapter Ice scanner and I'm going to set it up. I would like to get an understanding of how it works. I also want to use the Snapter Ice scanner at the same time as I am using my Epson scanner, which is installed on my home PC. I can't get the Snapter Ice scanner to work and the Epson is not recognized as a scanner. What is the problem? Recently, I purchased a new scanner because my old Epson scanner died. I thought I could use the Snapter Ice scanner with my new scanner and it would run as a stand alone scanner. The problems were that my old computer would not recognize the scanner as a scanner and Snapter Ice would not start. "This program has successfully started and the Snapter Ice 2.0 r4 scanner is now ready for use. This program is full compatible with Windows XP, Windows Vista, Windows 7, Windows 8 and other operating systems. If Snapter Ice 2.0 r4 does not start properly and gives you error message, click the ok button for uninstall, and then enter uninstall.ini to delete all related directory files and uninstall software. 5ec8ef588b
