in the fake smbx 1.4 (change to 1.0) version we can see that the game is called tea.exe in the folder program files. in the folder program files\big blue bubble\ we can see the folder smbx with the game inside. inside this folder we can see a tea.txt file and a smbx.ini file. the tea.txt file is the original game tea file with very basic functions. the smbx.ini is the configuration file which contains all the options we can change. we can see this file has changed a lot and the main part is smd.ini which contains a lot of different options about the smbx 1.4. fake smbx 1.4 (change to 1.0) version features: - change to smbx 1.4 - clean up the code - add voice (and by that i mean 'it actually makes a text file with the english voice') - i decided to take a break from this project so this version was made a little later than the last one. i guess you can say this is version 2.0 since it is the 2nd release with a fully working voice. the version was tested by a few people and i hope that it will be of some help to you. in addition to this version there are still the tea.txt and smbx.ini files. these files are still available for download. for those who might need them the fake smbx 1.0) download is available for download. smbx is a game designed to be played with a game boy, which was released in 1997 by nintendo for the game boy color. it is not a true mario clone, and does not have a single player mode. instead, it consists of a series of levels that the player can play in any order. there are also some levels that can be played by more than one player simultaneously. in the japanese version of the game, the game's title screen also displays a series of icons of characters from the super mario bros. series. in the game, the player controls mario and yoshi, who run side-by-side to the left of the screen. the player must run through the level, jumping to avoid falling rocks and enemies. the game features 100 levels and a password to unlock the secret levels. the player loses a life when mario falls into a hole, and loses a life if yoshi falls into a hole or if the player falls into a hole. there is also a password to skip the intro and the ending credits.

on the wohlstand forums we have a dedicated sub-forum called smbx-38a. the sub-forum was created, because the official smbx-38a forum got closed in july 2016, also the smbx-38a team got deleted. the smbx-38a team members were huge contributors, especially the main developer wohlstand. because the official smbx-38a team was deleted in july 2016, the smbx-38a team members started to investigate, whether the smbx-38a was a fake or not. wohlstand has confirmed that the smbx-38a is a fake, but did not give any reason for this. in the wohlstand forums we have a dedicated sub-forum for the discussion of smbx-38a which is also the home for the smbx-38a team. the smbx-38a team tries to provide a solution to revive the smbx-38a as the successor of the original smbx. this is the first version of the smbx-38a and also the first version of the smbx-38a with an official name. the smbx-38a team were not sure if they should call it smbx-38a or just smbx-38. the team felt the name should be smbx-38, but this idea didn't really work out. so the team decided to call it smbx-38a. but because the name smbx-38a is already being used, the team decided to call their creation smbx-38a-a. the smbx-38a team created a thread on the wohlstand forums to call attention to the smbx-38a, to report the problem and to collect information on how the smbx-38a was being used. the smbx-38a team also created a page where the smbx-38a game could be downloaded. the smbx-38a team noticed that the smbx-38a was being used on a large scale and that the smbx-38a was being used by people who were not familiar with the original smbx. the smbx-38a team noticed that many people were using their smbx-38a as a source of income. because of this, the smbx-38a team decided to react and to try to solve the problem. it was a very difficult to develop a smbx-38a that would be compatible to the original smbx and to the smbx2. because of the high compatibility level with the smbx, we created a compatibility layer with the smbx. because of this, we have found out that the smbx-38a uses the smbx api and not the smbx-38a's own api. we also found out that the smbx-38a is compatible to the original smbx, smbx2 and also to smbx3. 5ec8ef588b
