Sound quality is defined by the difference between the signal that hits the ear drum and the signal that travels on to your brain. This difference is measured in decibels. The louder the sound, the lower the decibels. This is why bass drums and electric guitars have a lower decibel level than the low voices and piano. If you want to hear the difference between 2 music tracks, listen to them with your headphones or set your volume up to a deafening level and try to tell which one is louder. The old paper-covered, wax-crammed vinyl record was generally stored on a turntable (a mechanical device that turns a record to play it). The sound quality was so-so, but the convenience of the format was a major plus for the home user. Then came the digital age, where consumers are demanding HD quality content and compact devices. Today we have streaming audio, smart phone audio, a smart home connected speaker system. The danger of too many sounds spilling across your room is that all will be overly loud and you will get tired of listening to all this over the top music. Adding a subwoofer (speaker) is an excellent way to fill the room with a sound that fills out the lower bass frequencies and adds enveloping, enveloping, enveloping bass to movies, games, and TV shows. A subwoofer can be a great way to add a sense of space to any room in your house. But a subwoofer is not for everyone. With an expensive all-in-one system, it can be an attractive option. But if you are not committed to that type of home theater, a good all-purpose subwoofer with a decent clean sound, as well as a solid remote can work well in many spaces.

Sound quality is the number one priority when it comes to your streaming music service. Fortunately, TIDALs Hi-Fi version has the best sound quality you can get on the market today. We streamed a track to a pair of Bowers & Wilkins SHP40-P speakers, which cost about \$3,500, and the sound was unrivaled. The music was easier to differentiate between the left and right speakers of each pair, and was even clearer when we turned up the volume. We were also able to play the track at maximum volume for an hour without hearing loss. In the past, Dolby Atmos has been available on the lower priced Plus or Elite subscription services. While this is the best sounding version, there may be a bit of a lag before Dolby Atmos is available, as the company needs to update the product. The second limitation of streaming music in Dolby Atmos is that its hard to take your favorite tunes with you. To listen to Dolby Atmos music, you have to have special speakers that can simulate the Dolby Atmos experience, and that can be costly. B&W SHP40-Ps are special in that they can now be used with the Dolby Atmos system to take your music with you. Plus, both the SHP40-P and Dolby Atmos rely on the same Dolby spatial audio technology. This lets your music sound great in a Dolby Atmos system while also keeping the same sound quality in a stereo setup. Despite these limitations, it would be a shame to pass on such a great sound quality for music streaming. If you prefer to have the high fidelity Dolby Atmos version of music ready to stream, TIDALs Hi-Fi version lets you do just that. The only downside to TIDAL is that you need an extra device for it to work, meaning that you need a pair of TIDAL SHP40-Ps for Dolby Atmos, and a pair of speakers. When this is all said and done, you might save yourself a few hundred dollars, because after the subscription fee youd be left with less than \$500 dollars out of pocket for a sound setup. In our case, we got the Hi-Fi bundle of speakers for \$149, and the subscription for TIDAL for \$19.99 a month. 5ec8ef588b
