ghost itself is not a backup tool but it can be used to create a backup, restore or clone. when ghost first came out, it was designed to be a software-based backup and recovery tool for windows nt/windows 2000/windows xp and windows 2003 servers. since then, it has been built as a stand-alone software application that can be used on any windows system to create a full image of your hard drive or just one or several partitions. it is also possible to perform a backup of a windows server's system disk and boot record, and to clone a hard drive to another hard drive. the first thing that you need to know is that ghost is not an automated backup tool. it will not automatically backup your data when you save a document or run a virus scan, but will instead create a full-format image file of the partition or disk that you want to protect. the only exception to this is if you select the "delete the source disk" option, which will remove the source disk from your computer and create a backup. ghost will then back up the partition or disk that you selected. the second thing you need to know is that ghost works best on windows 7 systems. on windows xp or windows vista, it will create a full-format image file, which will not be usable for restoring. instead, you can create a bootable disk of the drive or partition that you want to protect. a bootable disk is a portion of your hard disk where the windows boot loader can be stored. you can then use your bootable disk to restore your windows system to a previous state. the next thing you need to know is that ghost uses a ".vhd" format file. this is the standard windows 7 format used by windows easy transfer to clone your hard drive. ghost can also back up other file types that have the ".vhd" extension, such as microsoft office documents, as well as other image formats. so if you want to clone a windows 7 system to a windows 7 system, you can either use ghost to back up the system to an image file, or you can use windows easy transfer to clone the system. on a windows xp or windows vista system, you can't use ghost to back up the system. instead, you can use windows easy transfer to clone the system. 5ec8ef588b
