I found this review really interesting and helpful. I was getting close to deleting my Photoshop license but this review has taken my mind off the idea, even if only for a bit. I have been learning to use many of the features that were mentioned in this review. I have been amazed in how little time I have been using the PhotoShop application and gaining control of the photograph or whatever it is that I am editing. It was not easy and can be a little overwhelming but, I will take my classes... One other thing that stood out to me is that he in the opening of his review says that the most common reason people use Photoshop is is when they need to make a collage or photofiltre. For some reason or another I can't seem to get anyone to make me print out a collage or just put their photos in a MS Paint and call it a day. So, I am a little behind but, I am going to give this another go. This is a great review. I can relate, after using Adobe products for years, called "Photoshop", I tried working with other competing programs but, didn't work for me. I am so happy to know that the Photoshop is still being continually developed to help make images, just that little bit more perfect. I find that I am using Photoshop in all areas – from perfecting a web design that I am finishing to a big high quality photo I am taking of my new house. Adobe Photoshop comes with complete libraries that let you save and share your work, including patterns, presets, fonts and graphics. The Photoshop Editor lets you organize and manage your files from within the application. The image browser is a powerful way to browse, select and manage images.
