If the Project Beta feature is for professionals, who need the ability to work on a temporary level (as there may be several project stages prior to a release), why are these features being hidden away for mere professionals? YouTube videos do not quite suffice as tutorials. Let us see the real-world examples of how Adobe is usually accomplished in this area. Photoshop comes with many tutorials, but not one can be found in the Apps folder. There usually is no tutorial that shows how to use the well-documented Process feature and other tools available. That is definitely not the way tutorials should be taught in Photoshop on iPad. If you are used to a more traditional workflow, you will forgive me for being a little annoyed at this odd default setting. Though I am not a designer, nor a professional photographer, I do live by a photo news site. So I use Lightroom and Adobe Camera Raw to process my raw data and watch in awe how other photographers handle it. Unlike many tablets and smartphones, the A9X CPU in my iPad Pro provides the necessary power to handle a 32-bit Photoshop raw file in multiple stages of editing. We can make corrections in Camera Raw or use the Adjustments feature. We can quickly go to Photoshop to add more adjustments or add effects. And we can easily create effects directly in Photoshop if we wish. We can even make Vectors from our images and Photoshop will turn that into a shape. Simply put, the iPad Pro has the resources to be a tool for real projection. But it does not have a tutorial that shows how to do that yet. While I can work with Lightroom and Adobe Camera Raw, Lightroom itself is designed for professionals and not for non-professionals.

Let's say you want to change the colors of your picture into something a bit more interesting. Maybe you want to make your image bluer or grayer, or you'd even like to tweak your colors so that the background fades more and your fill appears slightly more uniform. You can do these things in Photoshop using one of two tools: the Brush Tool and the Eraser Tool. You use them to do things like blend color seamlessly from one part of your image to another, or remove something entirely. It's an example of the power of the computer: you can change its colors and adjust its appearance in an infinite

number of ways, depending on your personal taste. You start by erasing some of the color from a certain area. When you choose the Eraser Tool (hold the ALT key while you click and drag the tool), your cursor changes to reflect this, and you'll see a set of colors on a color wheel in the middle of the screen. To get started, select the Eraser Tool and pick a color on the color wheel. As you drag the eraser, the area of your picture where it touches will become lighter or darker by the same amount as your selected color. You can hold the CTRL key to override the default brush size, and the PRIME key to turn on the Saturate feature, which enforces the color scheme of the surrounding pixels. As soon as you've erased some pixels from a certain area, you can see what it looks like in the background. If you're working with a photo of a street, for example, and you've selected a lighter version of the pavement, you'll notice that the cracks and cracks in the road stand out from the rest of the image, giving the street human and life-like dimensions. e3d0a04c9c
