The new feature that makes a final determination as to whether Adobe's flagship photo-app is a powerful or a weak tool is the Presence feature. It's built to highlight the presence of a specific object—as an example, if you're looking at a series of photographs of the same person but different angles, you can see which photographs have the person in one specific place. 1. **Note:** The note-bubble option can also be used to add a white note or a transparent window to your photo. This light show which photo has the presence of the note flag is super easy to view and is a nice feature for showcasing a favorite frame. 2. **Notes:** Just like a regular note, the new addition allows you to store ideas and worklists. You can choose to show a note to all viewers, or have only certain individuals see notes in your photo via a private note. This module also has similar functionality to the Medium Gallery feature, which allows you to store multiple notes on a single image. 3. **Animation:** This is like a simple on/off, with the added bonus of some super-cool animation. You can choose from two modes—time-based (when the camera is physically on a slow shutter), or a map-based (when the cam's movement resembles typical panning). This feature would be particularly great for those who like the visual trickery of panoramic photos. Lightroom 5's most valuable feature is the dynamic, iPad-based editing mode. In this mode, your selected photos are displayed as thumbnails, with small edits you've made to the images. You can stop, change, and zoom into individual images using a pinch gesture on the iPad's screen. The multi-touch gestures on the iPad touch screen are made easier to use with the new gesture, which responds to two fingers sliding in opposite directions. In addition, you can manually use the version controls on the bottom. The new Edit module, which does away with the old: "Absolutely no image manipulation" edit mode, gives you a new set of tools to work with the image.
