People generally like to add shock value in their photographs by using unconventional lenses. One of the most unusual filter people use is the Sepia Tone, which adds a “pastel effect” to digital images. This filter is great to add a little pastel effect to your photos, especially if you have a lot of dull, natural-looking subjects. You can also use the Color Select tool to highlight bits of an image to take it a different direction, or simply to make something pop a little more. Remember when we discussed that the Grid Type tool made an appearance in Photoshop? A very minor feature, to be sure, but one that makes a tremendous difference in your ability to precisely position and resize text. Resizing text is essential if you want to put a museum sign into a particular space, or use text in a customizable way. In the images below, you can see how the new Type tool allows you to quickly and easily add a sign and add an effect to change the readability of the lettering. The horizontal and vertical guides that appear when you first select a shape are useful for more than just positioning. They can be used to create guides for creating perfectly straight lines. The Rectangular Guides tool lets you move the guides to the correct positions, and then lock the guides so they stay in place in a particular spot. You can even add guides to the new Fill option, for a combination of solid fill color and a dashed or dotted line. Flash. All right, I’m kidding about the title, but that’s the name of Photoshop’s new feature: the ability to open Photoshop in Flash mode for editing. Using the Edit In Flash command at the top level of the workspace, you can edit individual layers in Photoshop in an external Web browser or create new layers. It’s like taking a photo, opening it in a new window, and editing it there—except that you have more control over your work and can access the original file from anywhere. But it’s always smart to be extra cautious because a Web browser is a bit “wild west” designed for creative use.
