With *Adobe Photoshop CC*, you have the option to open one or load many files at a time. The former is a lot faster but the latter gives you a chance to preview different images in the Background View before making any changes. Especially since *Adobe Photoshop CC* has a built-in image browser, this second approach is the most effective way to go through during any editing session. **WHY WE'RE LOVING IT:** Photoshop has always been the basic "secret weapon" for photographers. Once Adobe bought the brand, I felt a lot safer about buying their software, as they obviously knew what they were doing. Adobe also continued updating the interface after the purchase, and that combined with the large number of features, makes Photoshop the ultimate tool to do everything from making quick edits to mastering a photography. The easiest place to see the essentials of the Adobe Photoshop is to dive headlong into the dialog boxes and shortcuts. There are three of them: the program itself, the Help system and the system itself. A fresh release of the software seems to have lead to a fresh round of controversy. In the recent Big Seller updates, it's been reported by some Lightroom users that there isn't an option when you share a photo for others to approve the use of the image. In a post to the Adobe forums, an Adobe engineer has confirmed the lack of this function will be fixed in a future update which may not be ready in time for the release of CS6. The solution to the problem is to use the "share for review" option as it has been available since LR 5. In all cases, the functionality has been available in the Android version of Lightroom. Hopefully the availability of the same feature in the desktop versions will help address the disappointment some users feel.

It might be worth the wait if there are any surprises in CS6.

Regards!

The layer mask's color is always black. By using the layer mask, you can paint the image in black or white. You can use this as a brush, which enables you to erase the image or paint new details on the layer. The layer mask can also be the basis for more complex masking techniques. “With Share for Review, the beauty of Photoshop is brought to life in ways we never could have imagined at the beginning of the decade,” said Shantanu Narayen, CEO, Adobe. “Starting today, Photoshop on any device, whether it’s a laptop, tablet or smartphone, can be a powerful, expressive, collaborative work environment right from inside Photoshop. And as these features mature, Photoshop will be the working desktop for any image editor. As Photoshop transitions to a more co-located collaboration environment, we’re empowering users to have more control, and allowing photogs to work more efficiently with amazingly fast projects. We know that these features will appeal to creative professionals and enthusiasts who want to make beautiful images and videos with the creative digital lifestyle in mind.” Share for Review is a new feature that allows users to share projects on web pages, social media platforms and mobile apps. This type of collaboration in the context of Photoshop is new and worlds away from the traditional image viewing experience. The collaboration experience is accelerated via real-time notes, and the workflow is announced in real time to make it even easier to comment. Users can click to add notes directly to a project the moment they see an idea, and even add comments directly to specific pixels. In addition to notes, poll images for input, and link to the source file, design and share projects. When sharing for review, the most-recently edited project in the hub gets pushed to the front. Users can click and subscribe to projects and collaborate on the page. Users can also add comments directly to the project or anyone involved in that project through choices like one-click links, stickers, or notes. As a result, users can get a more in-depth view and control of the conversation, and the organic interactions help create a positive and collaborative environment for the project. Share for Review puts the control and responsibility solely in the hands of the user.
